Solar Spark® Vent Flares are simple, reliable, solar-ignited flares mounted directly on all types of landfill vents. These flares eliminate foul odors associated with flammable gas emissions.

Even in cloudy conditions the solar panel provides continuous ignition with no need for external power.

The patented Dual Expansion Carbureting Flare Head is designed for effective combustion of landfill gas at a wide range of ambient pressures from 2-140 SCFM. The unique flare head design also allows for operation in extremely windy conditions.

The ruggedly constructed Spark-Pilot™ provides a continuous ignition spark even in rainy conditions.

Guy Wire Kit

Cold Weather Insulation Kit

Data Logger

## Accessories

## Features

- ⚡ Eliminates Odors
- ⚡ Economical
- ⚡ Simple
- ⚡ Reliable
- ⚡ Easy to Install

## Alternative Mounting Options

The Solar Spark Vent Flare can be custom mounted to fit any situation. Contact us for details.

## Manufacturer Direct Pricing

The complete package includes solar ignition system, Spark-Pilot, flare head, flame arrester, piping, and stainless steel ball valve. All parts carry a one year warranty.

Flange adapters, insulation kits, and other custom components are available to meet your needs.
