

Case Study: Blue Butte Ranch – Gillette, WY

In October 2008, Anadarko Petroleum Corp used **EarthGuard Fiber Matrix** to help reclaim a newly laid pipeline that could not be drill seeded. Based on past hydroseeding experiences in the area, the reclamation contractor working for Anadarko anticipated only a 10% year-to-year re-vegetation growth success. Not only did **EarthGuard Fiber Matrix** provide effective erosion control, but growth had occurred in that time frame. When the site was visited in June 2009, the contractor estimated at least 70-75% growth on these slopes.

Unlike other spray-on product **EarthGuard Fiber Matrix** does not harden to form a crust that prevents seed germination and growth. It also requires less fiber mulch which in turn absorbs less water giving vegetation a greater chance of surviving.

Testing by the California Dept of Transportation has shown that our product was one of the few tested (including blankets) with superior results. Applied, **EarthGuard Fiber Matrix** is less expensive than blankets.

EarthGuard is university tested and worksite proven and is typically used in the following situations:

- 1) Full Seasonal Site Winterization - Single Application
- 2) Reclamation/Slope Stabilization
- 3) Home Site Pad Winterization
- 4) Storm-by-Storm Erosion Protection
- 5) Fire Burn Rehabilitation
- 6) Day-to-Day or Extended Dust Control Protection
