

Case Study: Aussie Acre Farms – Cobleskill, NY

In July 2008, Bill Van Handel of Aussie Acre Farms used **EarthGuard Fiber Matrix** to help revegetate a newly graded site. After 3.8" of rain in a 12 day period, Mr. Van Handel was extremely pleased. Not only did **EarthGuard Fiber Matrix** provide effective erosion control, but growth had occurred in that time frame. Compared to matting, **EarthGuard** saved Aussie Acres thousands of dollars.

EarthGuard® Fiber Matrix is a spray-on erosion product being used by most major land developers as a cost effective BMP for slopes and pads. **EarthGuard** is designed to work directly with soil to maintain its stability by both preserving existing soil structure and flocculating fine sediment being dislodged by storm water or wind. Unlike BFMs and other copolymers, **EarthGuard Fiber Matrix** doesn't harden to create a false barrier, which prevents water from entering the soil.

EarthGuard is university tested and worksite proven and is typically used in the following situations:

- 1) Full Seasonal Site Winterization - Single Application
- 2) Revegetation/Slope Stabilization
- 3) Home Site Pad Winterization
- 4) Storm-by-Storm Erosion Protection
- 5) Fire Burn Rehabilitation
- 6) Day-to-Day or Extended Dust Control Protection
